

ABSTRACT

5 An apparatus for control and certification of the delivery of goods and for the concurrent
control and certification of the execution of the related payment includes a system for
reading an electronic card and for managing authorization processes by the electronic
card issuing company, an apparatus for monitoring and interpretation of application
protocols for network data transmission systems connected to the system for reading an
10 electronic card, and a data storing unit of the various transactions monitored and
interpreted by means of the apparatus for monitoring and interpretation of the
application protocols.
